

# ACCESSING CARE WHEN Living with BECKER<sup>†</sup>

For those living with Becker, gaps in care and support lead to **uncertainty** and **frustration**.

## 1 SPECIALTY CARE DECLINES IN ADULthood

"I have been told I am not bad enough yet and there are not enough slots at the clinic" survey response

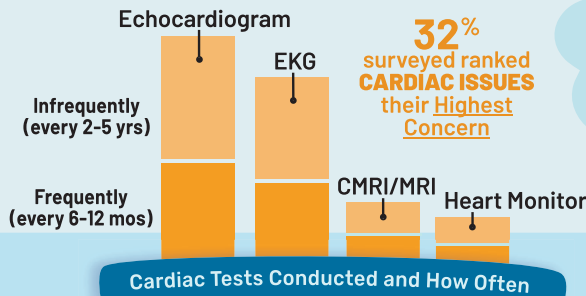

**SPECIALIZED CARE BECOMES LESS CONSISTENT** around the same age that symptoms often escalate.

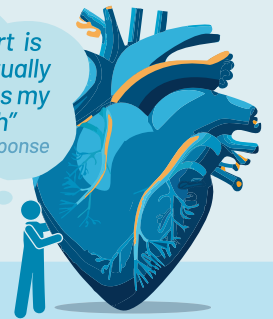

## 2 CARDIAC CARE IS NOT STANDARDIZED

**CARDIAC ISSUES** are the **MOST PRESSING HEALTH CONCERN** for the Becker community, but access to comprehensive **CARDIAC TESTING IS INCONSISTENT**.

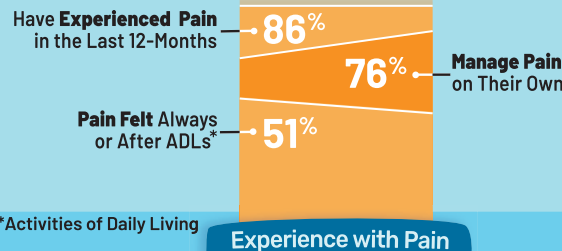

"My heart is what actually threatens my health" survey response

## 3 PAIN MANAGEMENT

"Nothing takes the pain away" survey response

**A MAJORITY** of those in the Becker community **EXPERIENCE PAIN**, but it is being **PRIMARILY ADDRESSED BY THE PATIENT**, without discussing it with a healthcare provider.

## 4 RESEARCH & CLINICAL TRIAL EDUCATION

**DEDICATED RESEARCH & EDUCATION** is desired by the Becker community, as well as **MORE BECKER INFORMATION** for community and for doctors.

"I wish my doctors were more up to date on care and research." survey response

**Consistent and standardized care will improve the lives of those in the Becker community.**
